The CDG FreeID system is a cost effective, simple to implement and robust biometric solution for the scanning, identification and secure transmission of digital fingerprints of individuals or entities on a network. Gemcom's FreeID system is the ideal solution to facilitate biometric identification (ID) within digital networks and systems such as PKI, databases, wireless and phone networks. Gemcom's FreeID system is based on the National Institute of Standards and Technology (NIST) "Secure Remote Identity Certification" (SRIC) and Secure Transmission of Asserted Digit Norms (STARID) standards. Gemcom's product line is based on the FreeID platform which has been certified by NIST and is the only biometric system in the industry based on NIST standards. "FreeID is the only integrated biometric identification and digital certification system that uses both biometric and non-biometric technologies to provide the most secure identification and authentication in industries where such

secure identification is required such as banking and financial services, healthcare, transportation and government", said

Richard Frisina, CEO of Gemcom. Gemcom's mission is to be the leading provider of biometric technology solutions for national and international identity management, particularly in the areas of law, ID and online banking. Gemcom will exhibit at ISE in September. BioVise Corporation (Nasdaq: BIOZ) announced that the company today reported financial results for the quarter ended June 30, 2009. A comparison of financial results from the same period last year showed a year-over-year growth in revenue of 9.2 percent. This represents the 13th consecutive quarter of revenue growth and the first quarterly growth since

the company's launch in January 2008. "We've made significant progress since the company's initial public offering," said

William R. Ertel, CEO. "In less than a year, BioVise has grown its revenue by nearly 50 percent, has more than doubled its backlog and has established and strengthened its position as a market leader in the rapidly growing, global market for syringes

and injection safety products. We're also committed to continuing our expansion of sales channels and distribution to the medical device market, which we estimate will be the next significant growth area for BioVise in the coming years. As we move forward, we remain committed to our manufacturing capabilities, the robustness and quality of our products and the growth of our customer base. For all of these reasons, I am very pleased with the progress we've made, and I am 82157476af
