[Hyperthermic chemotherapy of advanced liposarcoma. 17 cases treated by local hyperthermia]. Hyperthermic chemotherapy (HC) of 17 metastatic liposarcomas was performed on 14 patients. The HC was performed by thermosonography using a multielement applicator and a digital circulator through the skin. The whole body temperature was maintained at 43 degrees C for 2-4 hours and the mean temperature of the tumor was maintained at 43.5 degrees C for 3 hours. In the post-hyperthermic chemotherapy (HCT), the tumor regression rate was 81% with an average of 42%. The following factors were found to correlate with the tumor regression rate: 1) the evaluation of tumor volume by CT scan before the HCT, 2) the efficacy of the HCT in relation to the tumor volume, 3) the tumor responsiveness to the HCT. The 5-year survival was 73% in this series, and the difference in survival rate between this study and the previous studies were mainly due to the larger dose of the HCT and the improved radiation therapy after the HCT. There were no adverse reactions which required any treatment.

The Exponents – Greg Edwardes Originally from Adelaide, the band's native city, most of the group hail from Brisbane and the Gold Coast. Their early gigs at the Good Vibrations were with drummer, Matt Morrow, a now-ex-pat who played in Brisbane bands like The f678ea9f9e
